GENERAL DESCRIPTION

DESCRIPTION

LTN150XG-L02 is a color active matrix TFT (Thin Film Transistor) liquid crystal display (LCD) that uses amorphous silicon TFT as a switching devices. This model is composed of a TFT LCD panel, a driver circuit and a backlight system. The resolution of a 15.0" contains 1,024 x 768 pixels and can display up to 262,144 colors. 6 O'clock direction is the Optimum viewing angle.

FEATURES

- Ultra High Luminance
- Thin and light weight
- High contrast ratio
- XGA ((1024x768) pixels) resolution
- Low power consumption
- DE (Data enable) only mode.
- 3.3V LVDS Interface
- Pb-free product

APPLICATIONS

- Notebook PC and desktop monitors
- •If the usage of this product is not for PC application, but for others, please contact SEC

GENERAL INFORMATION

ITEM	SPECIFICATION	UNIT	NOTE
Display area	304.128(H)X228.096(V) (15.0"diagonal)	mm	
Driver element	a-si TFT active matrix		
Display colors	262,144		
Number of pixel	1024 X 768 (XGA)	pixel	
Pixel arrangement	RGB vertical stripe		
Pixel pitch	0.297(H) x 0.297(V)	mm	
Display Mode	Normally white		
Surface treatment	Haze 0, Hard-Coating 2H

Mechanical Information

	Item	Min.	Тур.	Max.	Unit	Note
	Horizontal (H)	316.8	317.3	317.8	mm	
Module size	Vertical (V)	241.5	242.0	242.5	mm	
	Depth (D)	ı	6.2	6.5	mm	
	Weight	1	530	545	g	

Note (1) Measurement condition of outline dimension

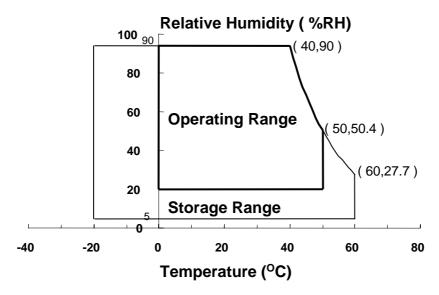

. Equipment : Vernier Calipers . Push Force : 500g ·f (minimum)

1. ABSOLUTE MAXIMUM RATINGS

1.1 ENVIRONMENTAL ABSOLUTE RATINGS

Item	Symbol	Min.	Max.	Unit	Note
Storage temperate	T _{STG}	-20	60	°C	(1)
Operating temperate (Temperature of glass surface)	T _{OPR}	0	50	°C	(1)
Shock (non-operating)	Snop	-	240	G	(2),(4)
Vibration (non-operating)	Vnop	-	2.41	G	(3),(4)

Note (1) Temperature and relative humidity range are shown in the figure below. 95 % RH Max. (40 $^{\circ}$ C \geq Ta) Maximum wet - bulb temperature at 39 $^{\circ}$ C or less. (Ta > 40 $^{\circ}$ C) No condensation

- (2) 2ms, half sine wave, one time for $\pm X$, $\pm Y$, $\pm Z$.
- (3) 5 500 Hz, random vibration, 30min for X, Y, Z.
- (4) At testing Vibration and Shock, the fixture in holding the Module to be tested have to be hard and rigid enough so that the Module would not be twisted or bent by the fixture.

1.2 ELECTRICAL ABSOLUTE RATINGS

(1) TFT LCD MODULE

 $V_{DD} = 3.3V$, $V_{SS} = GND = 0V$

ltem	Symbol	Min.	Max.	Unit	Note
Power Supply Voltage	V _{DD}	VDD - 0.3	V _{DD} + 0.3	V	(1)
Logic Input Voltage	Vin	V _{DD} - 0.3	V _{DD} + 0.3	V	(1)

Note (1) Within Ta (25 \pm 2 °C)

(2) BACK-LIGHT UNIT

Ta = 25 ± 2 °C

Item	Symbol	Min.	Max.	Unit	Note
Lamp Current	IL	2.0	7.0	mArms	(1)
Lamp frequency	F _L	50	80	kHz	(1)

Note 1) Permanent damage to the device may occur if maximum values are exceeded Functional operation should be restricted to the conditions described under normal operating conditions.

Doc.No.	LTN150XG-L02	Rev.No	05-A00-G-060102	Page	6 /	30
---------	--------------	--------	-----------------	------	-----	----

2. OPTICAL CHARACTERISTICS

The following items are measured under stable conditions. The optical characteristics should be measured in a dark room or equivalent state with the methods shown in Note (5). Measuring equipment: TOPCON BM-5A and PR-650

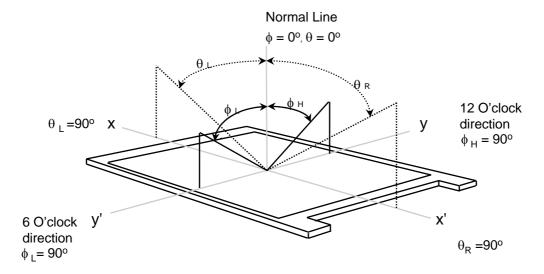

* Ta = 25 ± 2 °C, VDD=3.3V, fv= 60Hz, fDCLK = 65MHz, IL = 6.0 mA

Item		Symbol	Condition	Min.	Тур.	Max	Unit	Note

Doc.No.	LTN150XG-L02	Rev.No	05-A00-G-060102	Page	7 /3	30

Note 1) Definition of Viewing Angle : Viewing angle range (10 \leq C/R)

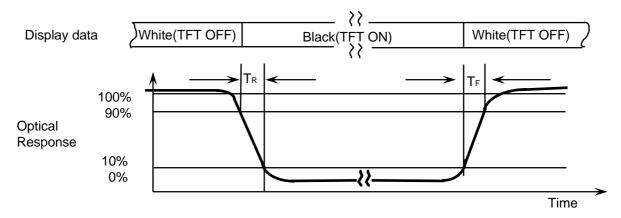

Note 2) Definition of Contrast Ratio (CR): Ratio of gray max (Gmax) ,gray min (Gmin) at 5 points(4, 5, 7, 9, 10)

$$CR = \frac{CR(4) + CR(5) + CR(7) + CR(9) + CR(10)}{5}$$

Points : (4), (5), (7), (9), (10) at the figure of Note (6).

Note 3) Definition of Response time:

Note 4) Definition of Average Luminance of White: measure the luminance of white at center point.

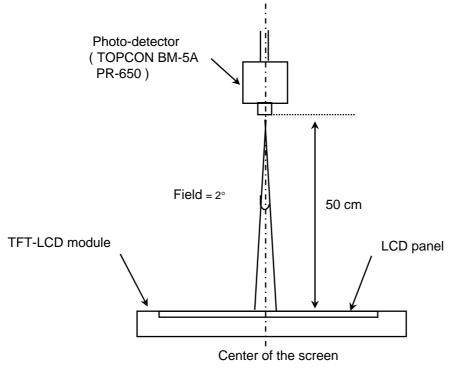

Average Luminance of White (Y $_{\text{L,AVE}}$)

$$Y_{L, = Y_{L7}}$$
 POINTS:, \bigcirc at FIGURE OF NOTE 6)

Note 5) After stabilizing and leaving the panel alone at a given temperature for 30 min, the measurement should be executed. Measurement should be executed in a stable, windless, and dark room. 30 min after lighting the backlight. This should be measured in the center of screen.

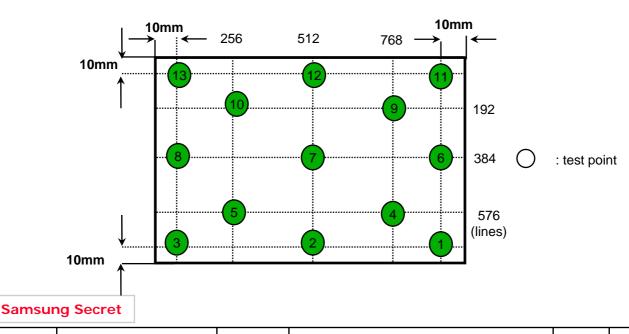

Lamp current: 6.0mA (Inverter: SIC-130T)

Environment condition : Ta = 25 ± 2 °C

[Optical characteristics measurement setup]

Note 6) Definition of 13 points white variation $(\delta \, L)$, [$(1) \sim (13)$] Maximum luminance of 13 points $\delta L =$ Minimum luminance of 13 points

3.2 BACK-LIGHT UNIT

The backlight system is an edge-lighting type with a single CCFT (Cold Cathode Fluorescent Tube). The characteristics of a single lamp are shown in the following table.

- INVERTER: SEM SIC 130T

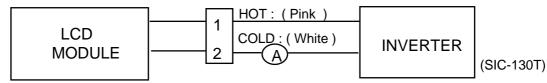

Ta= 25 ± 2 °C

Item	Symbol	Min.	Тур.	Max.	Unit	Note
Lamp Current	lι	3.0	6.0	6.5	mArms	(1)
Lamp Voltage	VL	-	710	-	Vrms	I∟=6.0mA
Frequency	f∟	50	60	65	KHz	(2)
Power Consumption	P∟		4.26		W	(3) I∟=6.0mA
Operating Life Time	Hr	10,000			Hour	(4)
Startup Valtage	\/-			1200	Vrms	25°C, (5)
Startup Voltage	Vs	•	-	1500	Vrms	0°C, (5)
Lamp startup time		-	-	1.0	sec	(5)

Note) The waveform of the inverter output voltage must be area symmetric and the design of the inverter must have specifications for the modularized lamp.

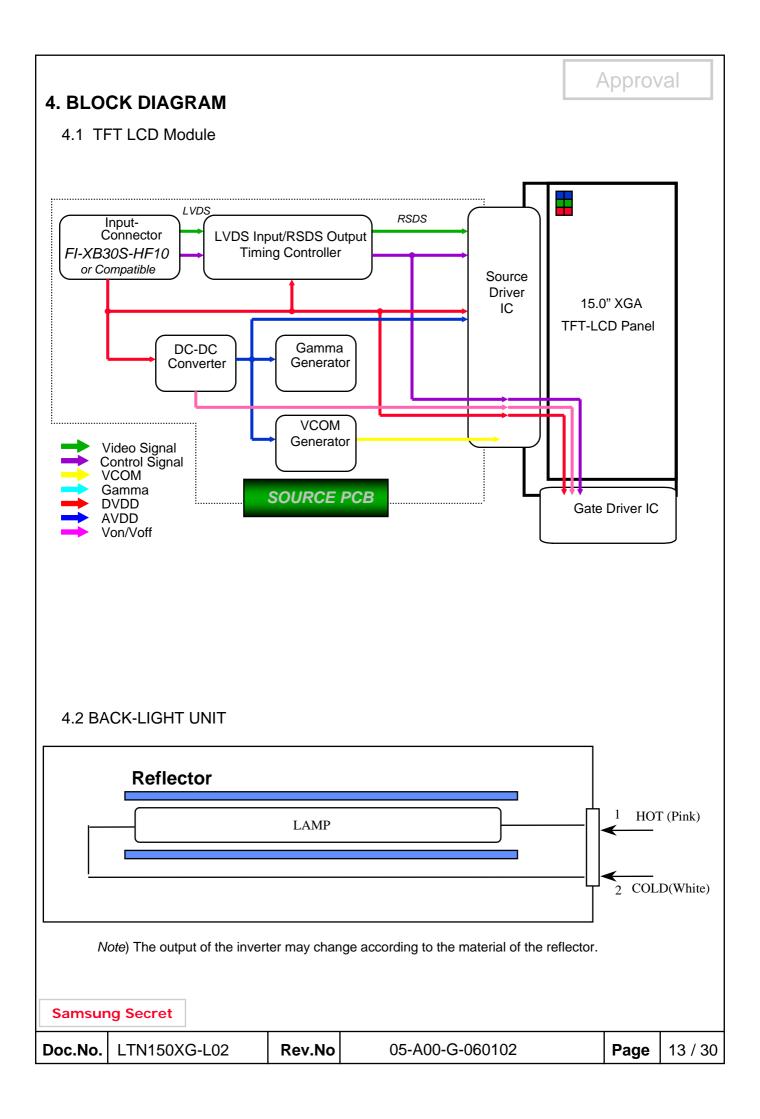

The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter(miss lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

Note (1) Lamp current is measured with a high frequency current meter as shown below.

- (2) Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency should be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.
- (3) Refer to I_L×V_L to calculate.
- (4) Life time (Hr) of a lamp can be defined as the time in which it continues to operate under the condition Ta= 25 ± 2 °C and I_L = 6.0 mArms until one of the following event occurs.
 - 1. When the brightness becomes 50% or lower than the original.
 - 2. When the Effective ignition length becomes 80% or lower than the original value. (Effective ignition length is defined as an area that has less than 70% brightness compared to the brightness in the center point.)
- (5) The inverter open voltage this voltage should be measured after ballast capacitor- have to be larger than the lamp startup voltage, otherwise backlight may has blinking for a moment after turns on or not be turned on.
 - If an inverter has shutdown function it should keep its open voltage for longer than 1 second even if lamp connector open.

6.3 Power ON/OFF Sequence

: To prevent a latch-up or DC operation of the LCD module, the power on/off sequence should be as the diagram below.

Power ON/OFF Sequence

T1: Vdd rising time from 10% to 90%

T2: The time from Vdd to valid data at power ON.

T3: The time from valid data off to Vdd off at power Off.

T4: Vdd off time for Windows restart

T5: The time from valid data to B/L enable at power ON.

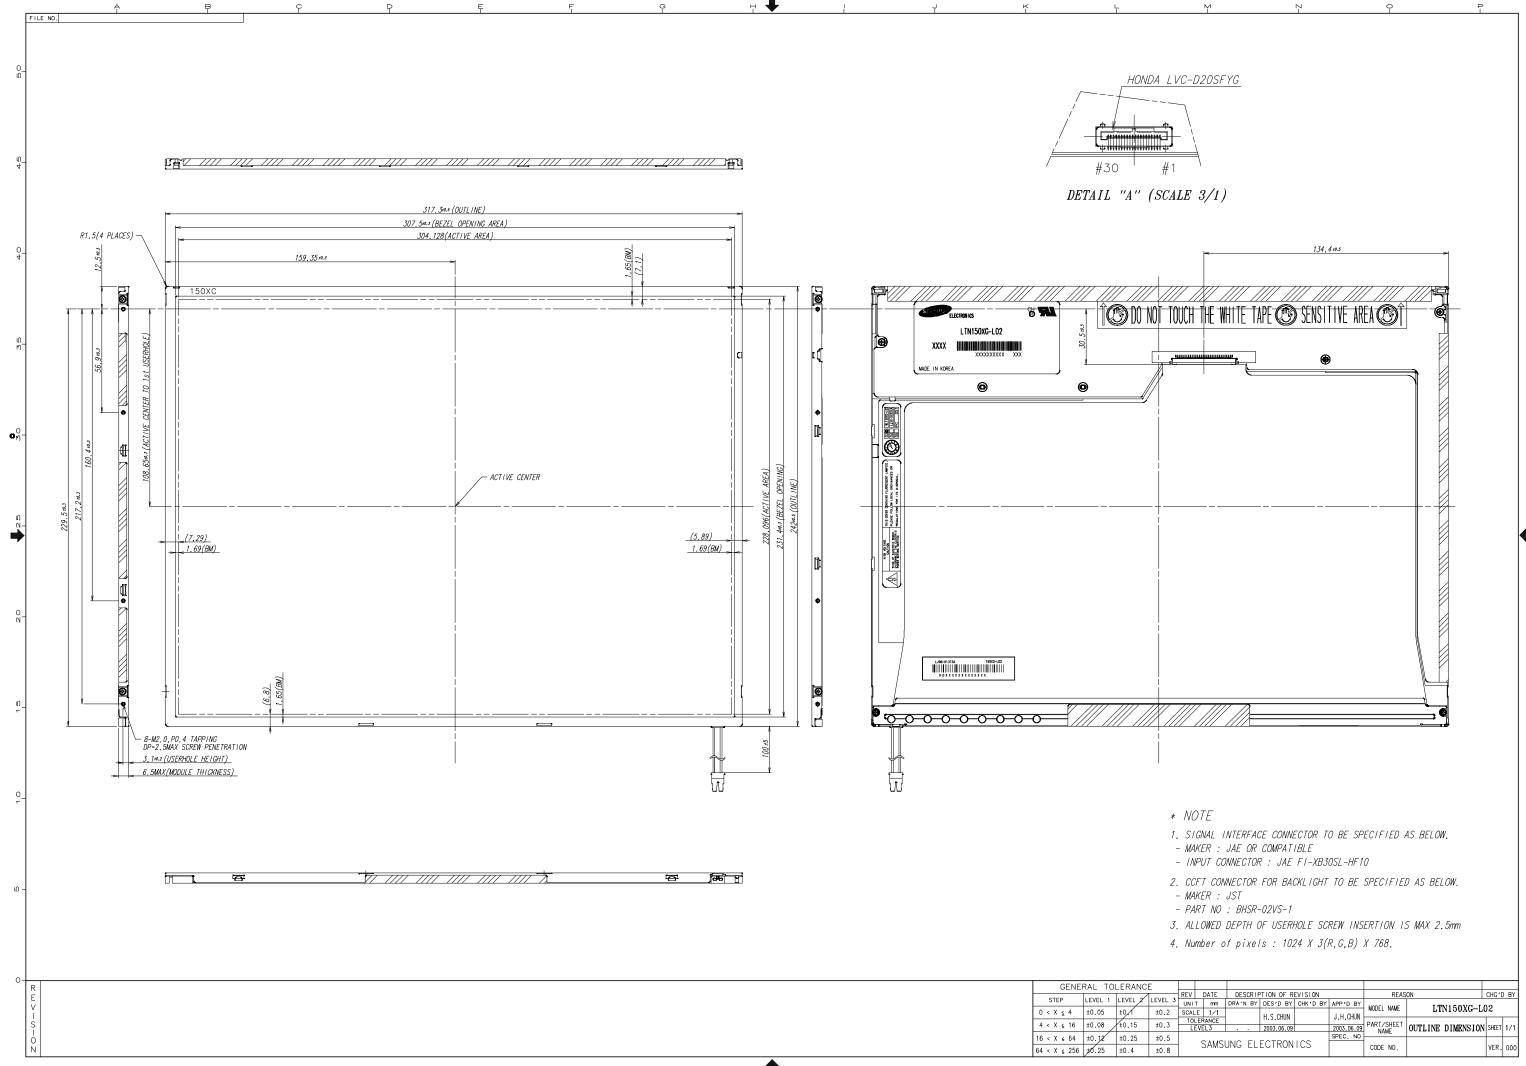

T6: The time from valid data off to B/L disable at power Off.

NOTE.

- (1) The supply voltage of the external system for the module input should be the same as the definition of VDD.
- (2) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become white.
- (3) In case of VDD = off level, please keep the level of input signals on the low or keep a high impedance.
- (4) T4 should be measured after the module has been fully discharged between power off and on period.
- (5) Interface signal shall not be kept at high impedance when the power is on.

8. PACKING

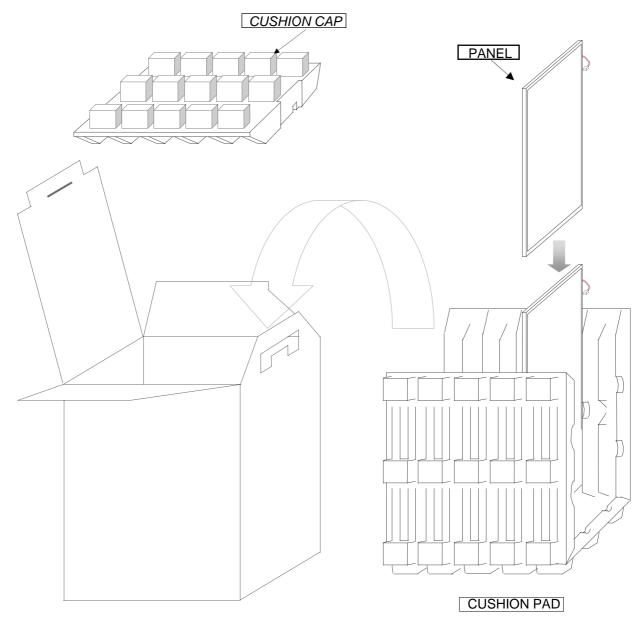

8.1 Packing

CARTON(Internal Package)

(1)Packing Form

Corrugated fiberoard box and corrugated cardboard as shock absorber

(2)Packing Method

Note (1)Total: Approx. 7.5Kg

(2)Acceptance number of piling : 10 sets (3)Carton size : 325(W) X 260(D) X 420(H)

(3)Packing Material

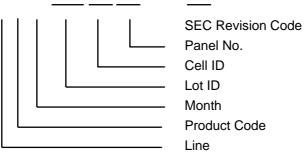

No.	Parts name	Quantity
1	Static electric protective sack	10
2	Cushion pad (Inner box) Included shock absorber	1set
3	Pictorial marking	2 pics
4	Carton	1 set

9. MARKINGS & OTHERS

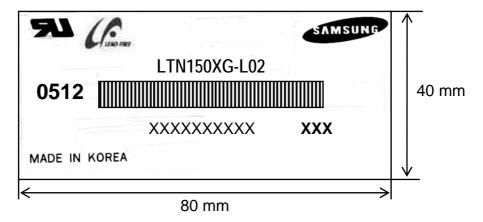

A nameplate bearing followed by is affixed to a shipped product at the specified location on each product.

(1)Parts number: LTN150XG-L02(2)Revision: Three letters(3)Control code: One letter

(4)Lot number : X X X XXX XX XX XXX

(5) Nameplate Indication

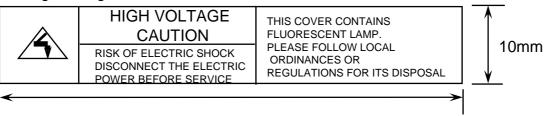

Parts name : LTN150XG - L02 Lot number : XXXXXXXXX

Inspected work week : 0512(Year 2005, 12th week)

Product Revision Code: XXX

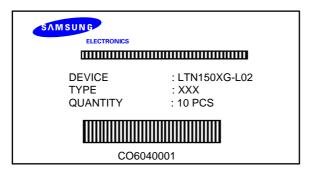

Doc.No.	LTN150XG-L02	Rev.No	05-A00-G-060102	Page	24 / 30	l
---------	--------------	--------	-----------------	------	---------	---

High voltage caution notice

70mm

(6) Packing small box attach

(7) Packing box Marking: Samsung TFT-LCD Brand Name

10. GENERAL PRECAUTIONS

1. Handling

- (a) When the module is assembled, It should be attached to the system firmly using every mounting holes. Be careful not to twist and bend the modules.
- (b) Refrain from strong mechanical shock and / or any force to the module. In addition to damage, this may cause improper operation or damage to the module and CCFT back-light.
- (c) Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than a HB pencil lead.
- (d) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.
- (e) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (f) The desirable cleaners are water, IPA (Isoprophyl Alcohol) or Hexane.

 Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- (g) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (h) Protect the module from static, it may cause damage to the C-MOS Gate Array IC.
- (i) Use fingerstalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (j) Do not disassemble the module.
- (k) Do not pull or fold the lamp wire.
- (I) Do not adjust the variable resistor which is located on the back side.
- (m) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (n) Pins of I/F connector shall not be touched directly with bare hands.

Samsung	Secret
---------	--------

2. STORAGE

- (a) Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35 °C and relative humidity of less than 70%.
- (b) Do not store the TFT-LCD module in direct sunlight.
- (c) The module shall be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during the store.

B. OPERATION

- (a) Do not connect, disconnect the module in the "Power On" condition.
- (b) Power supply should always be turned on/off by following item 6.3 "Power on/off sequence ".
- (c) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (d) The cable between the back-light connector and its inverter power supply shall be a minimized length and be connected directly. The longer cable between the back-light and the inverter may cause lower luminance of lamp(CCFT) and may require higher startup voltage (Vs).
- (e) The standard limited warranty is only applicable when the module is used for general notebook applications. If used for purposes other than as specified, SEC is not to be held reliable for the defective operations. It is strongly recommended to contact SEC to find out fitness for a particular purpose.

4. OTHERS

- (a) Ultra-violet ray filter is necessary for outdoor operation.
- (b) Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- (c) Do not exceed the absolute maximum rating value. (the supply voltage variation, input voltage variation, variation in part contents and environmental temperature, so on)

 Otherwise the module may be damaged.
- (d) If the module displays the same pattern continuously for a long period of time, it can be the situation when the image "sticks" to the screen.
